MonRoi creates new products benefiting the chess community worldwide.

Wireless chess tournament management made possible with MonRoi!

MonRoi's **Personal Chess Manger** is a wireless hand-held device for chess game recording and viewing. The MonRoi *global patent pending* system set-up takes a few minutes, and does not need cables or power plugs in the chess tournament area. MonRoi's **Professional Tournament Manager** can monitor thousands of chess games simultaneously with a single computer. Games are broadcast live on the Internet and archived in the **World Databank of Chess**.

FIDE certified MonRoi!

FIDE awarded a **10-year contract** to MonRoi in February 2004 to supply chess players, chess federations and tournament organizers the MonRoi system.

FIDE certified the MonRoi system at its Presidential Board meeting in February 2005 based on FIDE's Technical Commission report of the Category 10 GM/IM chess tournament held in January 2005 in Montreal where the MonRoi system was used instead of pen and paper.

The tournament was followed on-line by over *1.5 million viewers from 77 countries*. FIDE confirmed that MonRoi complies with chess rules and technical specifications. The MonRoi system can now be used in tournaments.

MonRoi gives chess federations the opportunity to migrate from manual chess tournament management to a single fully automated system, leveraging the full benefit of **live webcasts** - by making chess events instantly visible to a global audience of chess enthusiasts.

Personal Chess Manager

Imagine having your game in an electronic format ready for viewing as soon as you are finished playing! No more lost games. Your games will be automatically saved for later analysis and review. With **Personal Chess Manager** you will stay connected with your family and friends wherever you are.

Personal Chess Manager uses pictorial symbol recording, allowing a user to record chess game, to review games instantly, and to upload and download chess games from a computer.

While in recording mode, **Personal Chess Manager** cannot access the memory storage of games, nor programs that could help a chess player. It also **cannot** receive advantageous information due to its networking capabilities.

Professional Tournament Manager

- Manages thousands of games wirelessly
- "Plug and play", portable, and quickly set-up
- FIDE approved with advanced security
- Organizes tournament effectively
- Broadcast tournament live on the Internet
- Produces PGN files and bulletins automatically
